Patrick Rogers
ISO/IEC JTC 1/SC 22/WG 9 Convener
AdaCore Inc.

Dear Patrick Rogers:

On behalf of AXE Consultants, it is my pleasure to offer this formal contribution to WG 9 for consideration as a new Ada Reference Manual for the Ada programming language, to replace ISO/IEC 8652:2012.

As described in WG 9 document N-612, AXE Consultants created this contributed “source document” from the previous version of the same document, using input from experts and the community at large. The new source document is always based on the earlier version of itself, rather than on any preexisting ISO standard or any WG 9 N-documents.

AXE Consultants is the copyright holder for the source document and will retain unfettered ownership for that document, including the right to disseminate it freely and to produce derivative documents, for example. Furthermore, AXE Consultants understands that the AXE copyright statement will be removed and that an ISO copyright statement will be affixed to the document resulting from the ISO balloting process.

Sincerely,

Randall Brukardt
